Waterlogic Firewall™. Now Certified by WHO.

The Waterlogic Firewall is the only drinking water UV purification system that has met the strict international requirements of **WHO (World Health Organization)** for Water Treatment Technologies.
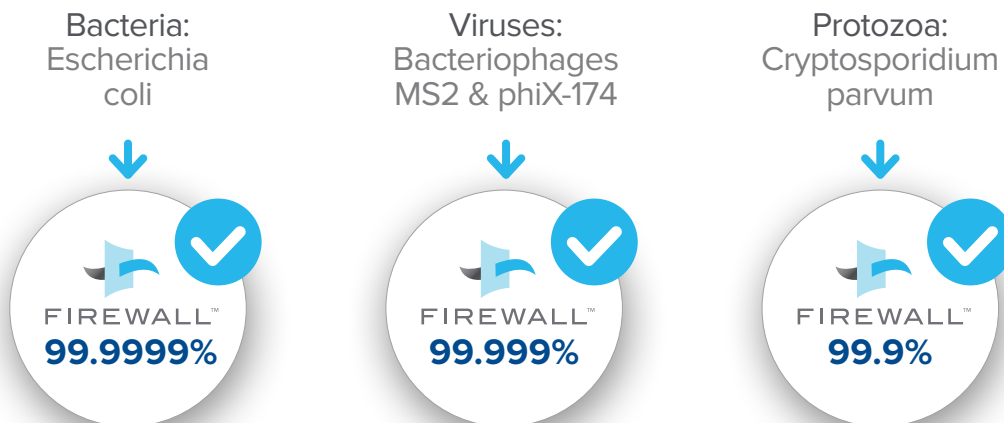

Firewall Tested

The product tested was the Waterlogic Hybrid, utilising the UV patented Waterlogic proprietary Firewall technology. Firewall purification system is also available in the: WL4; WL3; WL2; Cube and other Waterlogic models. WHO have established this test to evaluate and approve water treatment products to ensure they provide efficient and adequate pathogen protection.

WHO Testing

The tests were conducted by WHO in collaboration with NSF International to measure the reduction of three key pathogens in water: bacteria; viruses; and protozoa. Results were categorised by WHO into different Tiers. Only products which can provide a comprehensive pathogen protection are approved by WHO.

The Results

Firewall achieved the highest marks with **99.9999%** reduction in bacteria and **99.999%** in viruses. An excellent result was also achieved for Protozoa with a **99.9%** reduction. Overall Firewall achieved an outstanding Tier 2 status for comprehensive protection from the three main classes of pathogens. This is an exceptional result unmatched by other products.

Bacteria: Escherichia coli	Viruses: Bacteriophages MS2 & phiX-174	Protozoa: Cryptosporidium parvum
FIREWALL™ **99.9999%**	FIREWALL™ **99.999%**	FIREWALL™ **99.9%**

Conclusion

The Firewall system has achieved another significant international certification which confirms how highly effective the Waterlogic Firewall technology is at making drinking water safe. This WHO certification brings another outstanding seal of approval, with Waterlogic meeting WHO's strict International standard for water quality and purification.
